2.3 Student Participation in Workshops

2.3.1 Code Cell Activities: Codecell's Inclass Kaggle Competition

Codecell's Inclass Kaggle Competition :Predictive Analytics in Human Resources In Association with VESIT - IIC (Institute Innovation Council) & VESIT - IQAC (Institute Quality Assurance Cell)

The Kaggle machine learning competition was a 48 hour competition starting at 11:30 A.M , 27th March and held on the Kaggle platform in the form of an in class competition . The aim of this competition was to predict Employee Attrition by the given data about his/her past history. With machine learning, HR managers would be able to foresee vacant positions, team budget needs, what employee benefits they can improve to keep employees happy, what departments are the most and least likely to stay at a position for a length of time, and more. As a business, we can predict questions like

What causes employee churn?
 Why do we lose valuable employees?
 When will an employee most likely leave the company?

The dataset for the competition was procured from IBM.
