| Pre-requisite: |                              |
|----------------|------------------------------|
| 1)             | Engineering Mathematics-I,   |
| 2)             | Engineering Mathematics-II   |
| 3)             | Engineering Mathematics-III, |

| Course Ob | ojectives:  |
|-----------|---|
| 1         | To build a strong foundation in mathematics, provide students with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems.  |
| 2         | To prepare student to apply reasoning informed by the contextual knowledge to engineering practice, to work as part of teams on multi-disciplinary projects.  |
| 3         | To acknowledge the importance of sampling design and analysis methods for research and management in many other fields  |
| 4         | To get familiar with the mathematical formulation of a real-world problem, acquaint with the problem-solving techniques theoretically, tackle several parameters into account while dealing with the problem and make aware the students about the applications of various forms of Linear Programming. |
| 5         | To prepare the students to use a powerful statistical software platform SPSS (Statistical Package for the Social Sciences) for the analysis of statistical data in the future.  |

| Course O | utcomes: Learner will be able to  |
|----------|---|
| 1.       | <b>Probability theory</b><br>Students will understand various probability measures, distribution functions, and their characteristics. They will be able to Compute probability using probability distribution of discrete and continuous Random variable. Additionally, the knowledge regarding Bayes theorem will help them take various real-life problems that arise in the medical fields and industries                   |
| 2.       | <b>Probability Distribution and Sampling Theory -1</b><br>Students will know fundamental concepts of testing of hypothesis, formulation of statistical hypothesis in real-life situations, developing best test procedures to test the hypothesis, and the principles underlying sampling as a means of making inferences about a population. They can also apply the idea of probability distribution to engineering problems. |
| 3.       | <b>Sampling theory - 2</b><br>Students will be able to analyze real-life data by using different nonparametric test procedures  |
| 4.       | <b>Statistical Techniques</b><br>Students will apply the concept of Correlation and Regression, fitting of curve to the given data sets.  |
| 5.       | <b>Linear Programming Problems</b><br>Students should be able to formulate a given simplified description of a suitable real-world<br>problem as a linear programming model in general, standard and canonical forms. Linear<br>programming models can be solved by them using the simplex method, Big M method and<br>Dual simplex method  |
| 6.       | Non-Linear Programming Problems<br>Students will be able to solve Non-Linear Optimization problems using Lagrange's multiplier<br>method and Karush Kuhn Tucker Method.   |

| Module     | Detailed Content  | No. of<br>Hours |
|------------|---|-----------------|
| Pre-requis | ite: Engineering Mathematics-I, Engineering Mathematics-II,<br>Engineering Mathematics-III  |                 |
| 01         | <ul> <li>Probability Theory</li> <li>1.1 Definition and basics of probability, conditional probability.<br/>Total Probability theorem and Bayes' theorem.<br/>Applications of Baye's theorem.</li> <li>1.2 Discrete and continuous random variable with probability distribution<br/>and probability density function.</li> <li>1.3 Expectation, Variance, Moment generating function, Raw and central<br/>Moments, Covariance, Correlation coefficient, Skewness and Kurtosis of<br/>distribution and their properties.</li> </ul>               | 08              |
| 02         | <ul> <li>Probability Distribution and Sampling Theory: -1</li> <li>2.1 Probability Distribution: Binomial, Poisson and Normal distribution.</li> <li>2.2 Sampling distribution, Test of Hypothesis, Level of Significance, Critical region, One-tailed, and two-tailed test, Test of significance of mean and difference between the means of two samples for large samples.</li> <li>2.3 Degree of freedom, Student's t-distribution, Test of significance of mean and difference between the means of two samples for small samples.</li> </ul> | 08              |
| 03         | <ul> <li>Sampling Theory: -11</li> <li>3.1Chi-Square Test: Test of goodness of fit. Contingency table and Test of independence of attributes, Yate's Correction.</li> <li>3.2 Analysis of variance: F – Test,</li> <li>3.3 ANOVA: One-way classification, Two- way classification test.</li> </ul>  | 05              |
| 04         | <ul> <li>Statistical Techniques:</li> <li>4.1 Karl Pearson's coefficient of correlation (r).</li> <li>4.2 Spearman's Rank correlation coefficient (R) (with repeated and non-repeated ranks).</li> <li>4.3 Fitting of first- and second-degree curves.</li> <li>4.4 Lines of regression.</li> </ul>   | 06              |
| 05         | <ul> <li>Linear Programming Problems:</li> <li>5.1 Types of solutions, Standard and Canonical of LPP, Basic and Feasible solutions, slack variables, surplus variables, Simplex method.</li> <li>5.2 Artificial variables, Big-M method (Method of penalty)</li> </ul>  | 05              |
| 06         | <ul> <li>Nonlinear Programming Problems:</li> <li>6.1 NLPP with no constraint, one equality constraint (two or three variables) using the method of Lagrange's multipliers.</li> <li>6.2 NLPP with two equality constraints.</li> <li>6.3 NLPP with inequality constraints: Karush-Kuhn-Tucker (KKT) conditions.</li> </ul>   | 07              |
|            |   | 37              |

## **Internal Assessment**:

Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks.

**Mid Term Test**: One test is to be conducted when approx. 50% syllabus is completed. Duration of the midterm test shall be one hour.

Continuous Assessment: Continuous Assessment is of 20 marks. The rubrics for assessment will be considered on approval by the subject teachers.

#### **Rubrics:**

1. Content beyond syllabus presentation.

2. Multiple Choice Questions (Quiz).

Total 2 Quiz/ Presentation (10 Marks each) will be conducted during a semester (Preferably before and after mid semester exam).

#### **Internal Assessment:**

Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks. Mid Term test is to be conducted when approx. 50% syllabus is completed Duration of the midterm test shall be one hour.

#### **Continuous Assessment: -**

Continuous Assessment is of 20 marks.

The rubrics for assessment will be considered on approval by the subject teachers. The rubrics can be any 2 or max 4 of the following: -

| Sr.<br>no. | Rubrics  | Marks    |
|------------|--|----------|
| 1.         | *Certificate course for 4 weeks or more: -<br>NPTEL/ Coursera/ Udemy/any MOOC  | 10 marks |
| 2.         | Wins in the event/competition/hackathon  | 10 marks |
| 3.         | Content beyond syllabus presentation   | 10 marks |
| 4.         | Creating Proof of concept  | 10 marks |
| 5.         | Mini Project / Extra Experiments/ Virtual Lab  | 10 marks |
| 6.         | GATE Based Assignment test/Tutorials etc   | 10 marks |
| 7.         | Participation in event/workshop/talk / competition followed by small report and certificate of participation relevant to the subject (in other institutes) | 5 marks  |
| 8.         | Multiple Choice Questions (Quiz)   | 5 marks  |

#### Term work:

Total 25 Marks Term work will be based on overall performance in the subject. Attendance+Tutorials/Assignment/Viva/Mini Project based on entire syllabus.

| End Semester Theory Examination: |  |  |  |  |  |
|----------------------------------|--|--|--|--|--|
| 1                                | Question paper will be of 60 marks                         |  |  |  |  |
| 2                                | Question paper will have a total of five questions         |  |  |  |  |
| 3                                | All questions have equal weightage and carry 20 marks each |  |  |  |  |
| 4                                | Any three questions out of five needs to be solved.        |  |  |  |  |

| Course Code | Course Name     | Credits |
|-------------|-----------------|---------|
| ARC402      | Embedded System | 03      |

| Course Obj | ectives:  |
|------------|---|
| 1)         | To give an overview of embedded systems and make students aware of design challenges and technology.                            |
| 2)         | To impart knowledge of fundamentals of the MCS-51 microcontroller family and working of the system                              |
| 3)         | To make the students understand various programming tools and development of software using assembly and higher-level language. |
| 4)         | To give knowledge of integrated hardware of MCS-51.   |
| 5)         | To give knowledge of interfacing of MCS-51 with different peripheral devices such as LCD, keyboard, Memory, ADC, DAC etc.       |
| 6)         | To make the students capable of developing applications using learned concepts of hardware, software and interfacing.           |

| Course Outcomes: Learners will be able to: |   |  |  |
|--|---|--|--|
| 1)   | Explain the architecture of embedded systems.   |  |  |
| 2)   | Design systems to use the MCS51 features.   |  |  |
| 3)   | Design applications using peripherals of MCS51 microcontroller.                       |  |  |
| 4)   | Design and develop interfacing circuits of advanced peripheral components with MCS51. |  |  |
| 5)   | Explain the architecture of M0+ ARM processors.                                       |  |  |
| 6)   | Investigate, recommend and design sophisticated applications based on MCS-51.         |  |  |

#### **Internal Assessment:**

Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks. Mid Term test is to be conducted when approx. 50% syllabus is completed Duration of the midterm test shall be one hour.

#### **Continuous Assessment: -**

#### Continuous Assessment is of 20 marks.

The rubrics for assessment will be considered on approval by the subject teachers.

The rubrics can be any 2 or max 4 of the following: -

| Sr.<br>no | Rubrics  | Marks    |
|-----------|--|----------|
| 1.        | *Certificate course for 4 weeks or more: -<br>NPTEL/ Coursera/ Udemy/any MOOC  | 10 marks |
| 2.        | Wins in the event/competition/hackathon  | 10 marks |
| 3.        | Content beyond syllabus presentation   | 10 marks |
| 4.        | Creating Proof of concept  | 10 marks |
| 5.        | Mini Project / Extra Experiments/ Virtual Lab  | 10 marks |
| 6.        | GATE Based Assignment test/Tutorials etc   | 10 marks |
| 7.        | Participation in event/workshop/talk / competition followed by small report and certificate of participation relevant to the subject (in other institutes) | 5 marks  |
| 8.        | Multiple Choice Questions (Quiz)   | 5 marks  |

#### Term work:

Total 25 Marks Term work will be based on overall performance in the subject. Attendance+Tutorials/Assignment/Viva/Mini Project based on entire syllabus.

| End Semester Theory Examination: |  |  |  |  |
|----------------------------------|--|--|--|--|
| 1                                | Question paper will be of 60 marks                         |  |  |  |
| 2                                | Question paper will have a total of five questions         |  |  |  |
| 3                                | All questions have equal weightage and carry 20 marks each |  |  |  |
| 4                                | Any three questions out of five needs to be solved.        |  |  |  |

| ARC403         | Automatic<br>Control<br>Systems | 20                              | 20      | 60                    | 2                  |              |                    | 100   |  |

| Course | Course Objectives:  |  |  |  |  |  |
|--------|---|--|--|--|--|--|
| 1)     | The students should be able to learn the type of Systems, dynamics of physical systems, classification of control system, analysis and design objectives. |  |  |  |  |  |
| 2)     | The students should learn how to represent the system by transfer function using block diagram reduction method and Mason's gain formula.                 |  |  |  |  |  |
| 3)     | The students should be able to learn time response analysis and demonstrate their knowledge of frequency response.  |  |  |  |  |  |
| 4)     | Students should learn stability analysis of systems using Root locus, bode plot, polar plot, and Nyquist plot.  |  |  |  |  |  |

| Course Outcomes: Student will be able to |  |  |  |  |  |
|--|--|--|--|--|--|
| 1)                                       | Identify open and closed loop control systems.   |  |  |  |  |
| 2)                                       | Formulate mathematical models for physical systems.  |  |  |  |  |
| 3)                                       | Simplify representation of complex systems using reduction techniques.                               |  |  |  |  |
| 4)                                       | Use standard test signals to identify performance characteristics of first and second-order systems. |  |  |  |  |
| 5)                                       | Apply root locus technique for stability analysis.   |  |  |  |  |
| 6)                                       | Analyze performance characteristics of the system using Frequency response.                          |  |  |  |  |

# **Details of Syllabus:**

| Module | Content  | Hrs |
|--------|--|-----|
| 1      | <b>Introduction:</b><br>Definition of control system, open loop and closed loop system, examples.<br>Development of automatic control systems classification of control systems with | 04  |
|        | examples.  | 01  |
| 2      | Mathematical Models of Physical Systems:<br>Definition of physical systems, principle of superposition and homogeneity,  | 06  |
|        | linear/non-linear, time variant/time invariant systems. Types of dynamic model, linear elements of electrical and mechanical systems.  |     |
| 3      | Derivation of Transfer function:   | 07  |
|        | Definition of transfer function, transfer functions of physical systems, block diagram   |     |
|        | algebra, reduction rules, signal flow graphs-definition, construction, properties, and   |     |
|        | Mason's gain formula.  |     |
| 4      | Time Response Analysis:  | 08  |
|        | Standard test signals, transient and steady state behavior of first and second order systems, steady state errors in feedback control systems and their types.                       |     |

| 5 | Stability Analysis and Root Locus:  | 06 |
|---|---|----|
|   | Concepts of stability, definitions, bounded input – bounded output stability, relative  |    |
|   | stability and robust stability, Routh stability criterion. Root-locus concepts, general |    |
|   | rules for constructing root-locus, root-locus analysis of control systems.              |    |
| 6 | Frequency Response and Stability Analysis Correlation between time and                  | 08 |
|   | frequency response, polar plots, Bode plots, Nyquist stability criterion, frequency     |    |
|   | response specifications, stability analysis using-bode, polar, definitions and          |    |
|   | significance of gain margin and phase margin.   |    |
|   | Total   | 39 |
|   |   |    |

| Course Objectives: |   |  |  |  |
|--------------------|---|--|--|--|
| 1)                 | To introduce the students the basic properties of Op-amp, analysis and design of electronic circuits using Op-amp |  |  |  |
| 2)                 | To give the knowledge about the various components of analog signal conditioning                                  |  |  |  |
| 3)                 | To impart knowledge of design considerations of analog signal conditioning of components.                         |  |  |  |
| 4)                 | To give the student's knowledge about various components digital signal conditioning.                             |  |  |  |
| 5)                 | To make the students capable to apply knowledge to design various transducer signal conditioning circuits         |  |  |  |

| Course Outcomes: On successful completion of course learner/student will be able to: |   |  |  |  |
|--|---|--|--|--|
| 1)   | Describe op-amp parameters and types and derivation of operational amplifiers                         |  |  |  |
| 2)   | Design the various operation amplifier circuits for linear applications.                              |  |  |  |
| 3)   | Formulate and design non-linear applications of op-amp.   |  |  |  |
| 4)   | Design of analog signal conditioning circuits   |  |  |  |
| 5)   | Design of Digital signal conditioning circuits  |  |  |  |
| 6)   | Apply signal conditioning concepts to design various transducer/ sensors signal conditioning circuits |  |  |  |

**Prerequisite:** Knowledge of various sensors and basic electronics.

# **Details of Syllabus:**

| Module | Contents  | Hrs. |
|--------|---|------|
|        | Fundamentals of Operational Amplifier   |      |
| 1.     | Block diagram of Operational amplifier, Ideal Op Amp, characteristics of op-amp, op-amp parameters, Operational amplifier open loop and closed loop configurations, Inverting and non-inverting amplifier.  | 04   |
|        | Linear Applications of Operational Amplifier  |      |
| 2.     | Amplifiers: Adder, subtractor, difference amplifier, Integrator, and<br>practical integrator, Differentiator and practical differentiator, Current to<br>Voltage converter, voltage to current converter (grounded and floating<br>load), Instrumentation amplifier with three Op-amps, and application of<br>Op-Amp in Transducer Measurement System.  | 08   |
|        | Nonlinear Applications of Operational Amplifier   |      |
| 3.     | Comparator and its characteristics, Zero Crossing Detector (ZCD), Schmitt<br>trigger, window detector, Sample and Hold Circuit, Peak to Peak Detector,<br>Precision half wave and full wave rectifiers, Sine wave oscillators using op-<br>amp.: Barkhausen criteria, Wein bridge oscillator, RC phase shift oscillator.<br>Waveform Generators: Square wave generator and triangular wave<br>generator, Design and applications of Multivibrators: Astable, Monostable<br>using IC 555, PLL. | 08   |
|        | Analog Signal Conditioning  |      |
| 4.     | Standard analog signals, Signal Level and bias changes, Linearization, conversion, filtering and impedance matching, concept of loading. Voltage divider, Wheatstone bridge circuits, Active filter.  | 04   |
|        | Guidelines for analog signal conditioning design and design-based problems.   |      |
|        | Digital Signal Conditioning   | 07   |
| 5.     | Converters – ADCs and their different types, DACs and their different types, V to F and F to V converters. Characteristics of digital data – digitized value, sampled data system and linearization.  | 07   |
|        | Transducer Signal Conditioning  |      |
| 6.     | Signal Conditioning of Temperature, Pressure, optical, strain gauges,<br>Displacement and piezoelectric transducers signal conditioning.  | 08   |

#### **Internal Assessment:**

Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks. Mid Term test is to be conducted when approx. 50% syllabus is completed Duration of the midterm test shall be one hour.

#### **Continuous Assessment: -**

Continuous Assessment is of 20 marks.

The rubrics for assessment will be considered on approval by the subject teachers.

The rubrics can be any 2 or max 4 of the following: -

| Sr.<br>no | Rubrics  | Marks    |
|-----------|--|----------|
| 1.        | *Certificate course for 4 weeks or more: -<br>NPTEL/ Coursera/ Udemy/any MOOC  | 10 marks |
| 2.        | Wins in the event/competition/hackathon  | 10 marks |
| 3.        | Content beyond syllabus presentation   | 10 marks |
| 4.        | Creating Proof of concept  | 10 marks |
| 5.        | Mini Project / Extra Experiments/ Virtual Lab  | 10 marks |
| 6.        | GATE Based Assignment test/Tutorials etc   | 10 marks |
| 7.        | Participation in event/workshop/talk / competition followed by small report and certificate of participation relevant to the subject (in other institutes) | 5 marks  |
| 8.        | Multiple Choice Questions (Quiz)   | 5 marks  |

#### Term work:

Total 25 Marks Term work will be based on overall performance in the subject. Attendance+Tutorials/Assignment/Viva/Mini Project based on entire syllabus.

| End Semester Theory Examination: |  |  |  |  |  |
|----------------------------------|--|--|--|--|--|
| 1                                | Question paper will be of 60 marks                         |  |  |  |  |
| 2                                | Question paper will have a total of five questions         |  |  |  |  |
| 3                                | All questions have equal weightage and carry 20 marks each |  |  |  |  |
| 4                                | Any three questions out of five needs to be solved.        |  |  |  |  |

| Course Objectives: |  |  |  |  |
|--------------------|--|--|--|--|
| 1)                 | To impart knowledge of different control system components like Hydraulic, Pneumatic, Electrical & Electronics and their comparison. |  |  |  |
| 2)                 | To make the students learn different types of Transmitters.  |  |  |  |
| 3)                 | To make the students to understand concept of control valve, different types, their working & selection criteria.                    |  |  |  |
| 4)                 | To make the students to learn various Auxiliary process control components and its applications                                      |  |  |  |
| 5)                 | To give the students an overview of Industrial Control components & their Need in Instrumentation.                                   |  |  |  |

| Course Outcomes: On successful completion of course learner/student will be able to: |  |  |  |
|--|--|--|--|
| 1)   | Explain and select various pneumatic system components and circuits.               |  |  |
| 2)   | Select and compare various control systems like Hydraulic, pneumatic and electric. |  |  |
| 3)   | Apply knowledge to classify, select and use various transmitters.                  |  |  |
| 4)   | Classify and select various control valves and their accessories.                  |  |  |
| 5)   | Describe and select industrial components and study their usage.                   |  |  |
| 6)   | Demonstrate major components of industrial robot.                                  |  |  |

| Module | Contents  | Hours |
|--------|---|-------|
| 1      | Overview of Automation components   | 02    |
|        | Introduction, significance of Automation components.  |       |
|        | Need and Classification. Industrial applications.   |       |
| 2      | Pneumatic and Hydraulic Components:   | 06    |
| -      | Description of the second of the second of the second plant Air Air   | 00    |
|        | Pneumatic components: ISA symbols, Instrument Air and Plant Air. Air<br>compressor system and its accessories. Directional control valves and special<br>types of pneumatic valve such as Pilot-operated valves, non-return valves, Flow<br>control valves, Sequence valves, and Time delay valve, Linear actuators- Single-<br>acting, Double-acting, and special type of double acting cylinder, process<br>Control Pneumatics: Pneumatic logic gates, Pneumatic Circuits-Standard Symbols<br>used for developing pneumatic circuits, Sequence diagram. |       |
|        | Hydraulic components: Hydraulic pumps (centrifugal, gear, lobe), Pressure regulation method, Loading valves, Hydraulic valves, Selection and comparison of pneumatic, hydraulic and electric systems  |       |
| 3      | Field Transmitters: Need for transmitters,  | 10    |
|        | Standardization of signals, concept of live zero and dead zero, classification of transmitters: Conventional, SMART, Digital  |       |
|        | Conventional Electronic type transmitters - temperature; Pressure (gauge); differential pressure; level (capacitive type); flow transmitter (magnetic);   |       |
|        | SMART /Intelligent transmitter; Block schematic and working of transmitter, specifications and features, applications of transmitters.  |       |
|        | Digital Transmitter: Block diagram and working of FF transmitters, specifications and features. Applications  |       |
| 4      | Final control Elements & accessories  | 10    |
|        | <b>Control Valves:</b> Need and specifications of Control Valve; Control valve terminology; Control valve constructional details; Air to Open (AO), Air to Close (AC); MOC (Material of construction); classification of control valve; applications, advantages, disadvantage of Globe, Ball, Needle, Butterfly, Diaphragm, Pinch, Gate, Solenoid; Flow characteristics (Inherent and Installed): Valve positioners: necessity, types-motion balance and force balance, Effect on Performance of control valve; Feeders & dampers.                       |       |
|        | Actuators: Types of actuators, Specifications, selection guidelines.  |       |
|        | <b>Converters:</b> Need for Converters and types, working of Pneumatic to Electrical and Electrical to Pneumatic converters.  |       |
|        | <b>VFD:</b> introduction and Need, working of AC & DC drives.   |       |
|        | Safety valves: working of safety valve, relief valve and their application.   |       |
|        | Accessories: Volume boosters, Air relays, solenoid valve  |       |

| 5 | Auxiliary control components  | 06 |
|---|---|----|
|   | <ul> <li>Panel Switches: Construction, symbolic representation, working, application of Toggle switches, Push buttons, Selector switches, DIP switches, Rotary switches, Thumbwheel switches, Drum switch, emergency push button, Tactile switch, Switch specifications.</li> <li>CAM SWITCHES MAGNETIC contactors, PILOT Light.</li> <li>Industrial switches: Temperature, Flow, Level and, Pressure Switch, Vibration switch.</li> <li>Control Relays: Construction, working, specifications, and applications of Electro-</li> </ul> |    |
|   | mechanical relay, Solid state relays. Interposing relays and Overload relays.<br><b>Contactors/starters:</b> Construction, working, specifications and applications of starters and contactors. Comparison between relays and starters /contactors.<br>Alarm annunciators and its sequences   |    |
| 6 | Components of Industrial Robot  | 05 |
| U | Manipulators, End Effectors, Feedback devices, Controllers, and Locomotive devices, Limit switches, proximity switches.   | 05 |
|   | Overview of DC motor, stepper motor and servo motor.  |    |

|--|------|------|----|----|----|
|  |      |      |    |    |    |

| Cours | se Objectives:   |
|-------|--|
| 1)    | To explain the assembly and C programming concepts.  |
| 2)    | To explain addressing modes and instruction set of MCS-51 and develop programs using instructions.   |
| 3)    | To give knowledge of integrated hardware of MCS-51 and o study different SFRs associated with integrated peripherals and to give knowledge of interfacing of MCS-51 with different peripheral devices such as LCD, keyboard, Memory, ADC, DAC etc. |
| 4)    | To introduce the students the basic properties of Op-amp, analysis and design of electronic circuits using Op-amp.   |
| 5)    | To give the knowledge about the various components analog and digital signal conditioning  |
| 6)    | To make the students capable to apply knowledge to design various transducer signal conditioning circuits  |

| Cours | se Outcomes: The students will be able to:  |
|-------|---|
| 1)    | Develop programs to configure the peripherals in 8051 and to design and interface peripheral components with MCS 51 |
| 2)    | Design programs to use interrupt in 8051.   |
| 3)    | Design and interface peripheral components using communication protocols.   |
| 4)    | Evaluate op-amp parameters and design various linear and non-linear applications using op-amp.                      |
| 5)    | Apply principles of analog & digital signal conditioning for op-amp based circuit design.                           |
| 6)    | Design and develop signal conditioning circuits for different transducers   |

# List of Experiment:

| Sr. No. | Details  | CO<br>Mapping |
|---------|--|---------------|
| 1       | To develop programs using Timer /Counter of MCS-51.  | CO1           |
| 2       | To develop programs using the Ports of MCS-51 using C programming.                                   | CO1           |
| 3       | To develop programs for Timer or External Interrupts of MCS-51.                                      | CO2           |
| 4       | To develop a program for interfacing 7- segment displays with MCS-51.                                | CO1           |
| 5       | To develop a program for interfacing LCD displays with MCS-51 in C language.                         | CO1           |
| 6       | To develop a program for interfacing ADC/DAC with MCS-51 using C language.                           | CO1           |
| 7       | To develop a program for Serial Communication with PC using C programming.                           | CO3           |
| 8       | To develop a program for I2C/SPI Communication using C programming.                                  | CO3           |
| 9       | To develop a program for frequency measurement using ECCP and C programming.                         | CO1           |
| 10      | To develop a program for DC/ Stepper motor control using C programming.                              | CO3           |
| 11      | To implement Adder and Subtractor using Op-amp   | CO4           |
| 12      | To design Instrumentation Amplifier using 3 Op-amps.   | CO4           |
| 13      | To design and demonstrate I to V and V to I converter circuit  | CO4           |
| 14      | To Implement Precision rectifiers using Op-amp.  | CO4           |
| 15      | To design and demonstrate integrator and differentiator using Op-amp.                                | CO4           |
| 16      | To design and demonstrate second order LPF and HPF.  | CO4           |
| 17      | To design and implement Astable and Monostable Multivibrator using IC 555                            | CO5           |
| 18      | To design and demonstrate Analog to Digital converter circuit or Digital to Analog converter circuit | CO5           |
| 19      | Design signal conditioning circuit for Temperature Transducers like<br>RTD/Thermocouple/Thermistor   | CO6           |
| 20      | Design signal conditioning circuit to convert sensor output to 0-5V OR 4-20mA                        | CO6           |

## Term Work:

Term work should consist of 10 experiments.

Journal must include at least 2 assignments.

The final certification and acceptance of term work ensures satisfactory performance of

laboratory work and minimum passing marks in term work.

#### **Total 25 Marks**

(Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks)

| Course C | )bjectives:  |
|----------|--|
| 1)       | The students should be able to examine steady-state and frequency response of the Type 0, 1, and 2 systems.              |
| 2)       | The students should be able to examine steady-state and frequency response of first and second order electrical systems. |
| 3)       | The students should be able to examine time response analysis of first and second order systems.                         |
| 4)       | Students should inspect the stability of the system using Root locus, Bode plot, polar plot.                             |

| Course ( | <b>Dutcomes:</b> On successful completion of course learner/student will be able to:  |
|----------|---|
| 1)       | Plot time and frequency response of first-order electrical system.  |
| 2)       | Plot time response of second-order system.  |
| 3)       | Demonstrate the way to obtain the transfer function and validate transient and steady-state response using test signals such as step, ramp, and parabolic.        |
| 4)       | Understand the effect of the damping factor on system response.   |
| 5)       | Inspect the time response specifications of systems by using root-locus.  |
| 6)       | Inspect the frequency response specifications of systems by using bode-plot, Polar plot, Nyquist-<br>plot techniques, and comment on the stability of the system. |

## List of the Laboratory Experiments

| Sr. No | Contents   | СО      |
|--------|--|---------|
|        |  | Mapping |
| 1      | To plot the effect of time constant on first – order systems response.                       | CO1     |
| 2      | To plot the time response of first-order systems.  | CO2     |
| 3      | To plot the time response of second- order systems.  | CO2     |
| 4      | To examine steady state errors for Type 0, 1, 2 systems.                                     | CO3     |
| 5      | To study the block diagram reduction technique by using simulation software.                 | CO3     |
| 6      | To interpret the effect of the damping factor on the performance of the second order system. | CO4     |
| 7      | To inspect the relative stability of systems by Root-Locus using simulation software.        | CO5     |
| 8      | To inspect the stability of systems by Bode plot using simulation software                   | CO6     |
| 9      | To determine the frequency response specifications from Polar plot of system                 | CO6     |
| 10     | To inspect the stability of systems by Nyquist plot using simulation software.               | CO6     |

| Course ( | <b>Dbjectives:</b> The course is aimed at  |
|----------|--|
| 1)       | To make students understand the construction, working principle and application of various transducers used for flow measurement, strain measurement, pressure and vacuum measurement, force, torque and power measurement |
| 2)       | To study electro-chemical sensors and transducers used for density and viscosity measurement   |
| 3)       | To impart knowledge of different control system components like Hydraulic, Pneumatic and Electrical and their comparison.  |
| 4)       | To make the students to learn different process components and auxiliary process control components.   |

| Course ( | Course Outcomes: On successful completion of course learner/student will be able to:   |  |  |
|----------|--|--|--|
| 1)       | Explain working principle of strain gauges, pressure transducers   |  |  |
| 2)       | Learn Basic fundamentals of flow transducers identify types of flow and use different transducers for flow measurement.      |  |  |
| 3)       | Explain the terminologies of electrochemical, density, humidity, pH measurement sensors, and their applications in industry. |  |  |
| 4)       | Study, select and implement various pneumatic, hydraulic and electro-pneumatic system components and circuits.               |  |  |
| 5)       | Apply knowledge to classify, select and use various Transmitters, control valves and their accessories                       |  |  |
| 6)       | Describe the Need of Auxiliary process control components and study their industrial usage                                   |  |  |

# List of the Experiments:

| Sr. | Details   | CO Mapping |
|-----|---|------------|
| No. |   |            |
| 1   | Strain gauge characteristics and weight measurement                       | CO1        |
| 2   | Study use of semiconductor strain gauges for pressure measurement         | CO1        |
| 3   | Study measurement of pressure using bellows, diaphragm, bourdon tube,     | CO1        |
|     | manometer.  |            |
| 4   | Test and calibration of pressure gauges using dead weight tester.         | CO1        |
| 5   | Measurement of flow using orifice/venturi tube/nozzle/pitot tube          | CO2        |
| 6   | Measurement of flow using rotameter/ electromagnetic flow meter.          | CO2        |
| 7   | Study and characterization of pH meter/ conductivity meter.               | CO3        |
| 8   | Measurement of Density/Viscosity  | CO3        |
| 9   | Study of various pneumatic / hydraulic control system components          | CO4        |
| 10  | Study of various electro-pneumatic control system components.             | CO4        |
| 11  | Study operation and calibration of flow/ level/ temperature transmitter   | CO5        |
| 12  | Study of different types of control valve actuator.                       | CO5        |
| 13  | Calibration of I to P and / P to I converter.                             | CO5        |
| 14  | Study characteristics of control valve                                    | CO5        |
| 15  | Study different types and operation of control valve and valve positioner | CO6        |
| 16  | Study of pressure/temperature/level/flow switches and control relays.     | CO6        |

| Note: |   |
|-------|---|
| 1)    | Minimum of Ten experiments can be conducted during the semester for term work and practical examination   |
| 2)    | Factory visit is advised to understand the working of the control system components.  |
| 3)    | Assignments based on syllabus which will help students to understand the Topic can be given during the semester as a support to Evaluate Term work. |

| Course Objectives: To know the basics of algorithmic problem solving |  |  |
|--|--|--|
| 1)   | To read and write simple Python programs                   |  |
| 2)   | To develop Python programs with conditionals and loops.    |  |
| 3)   | To define Python functions and call them                   |  |
| 4)   | To use Python data structures lists, tuples, dictionaries. |  |

| Cours | Course Outcomes: Upon completion of the course, students will be able to |  |  |
|-------|--|--|--|
| 1)    | Read, write, execute by hand simple Python programs.                     |  |  |
| 2)    | Represent compound data using Python lists, tuples, dictionaries.        |  |  |
| 3)    | To develop python programs to plot and analyze the data.                 |  |  |
| 4)    | To learn simple Python programs for file handling and I/O operations.    |  |  |
| 5)    | Implement simple python programs for Machine learning applications       |  |  |
| 6)    | To develop Graphical User Interface for different Python programs        |  |  |

# List of the Laboratory Experiments:

| Module | Contents  | CO<br>mapping |
|--------|---|---------------|
| 1.     | Write a program to demonstrate different number data types in Python.   | CO1           |
| 2.     | Write a program to perform different Arithmetic Operations on numbers in Python   | CO2           |
| 3.     | Write a program to create, concatenate and print a string and accessing sub-string from a given string.   | CO2           |
| 4.     | Write a program to create, append, and remove lists in python.  | CO2           |
| 5.     | Write a program to demonstrate working with tuples in python  | CO2           |
| 6.     | Write a program to demonstrate working with dictionaries in python.   | CO3           |
| 7.     | Write a python program to find largest of three numbers.  | CO3           |
| 8.     | Write a Python program to convert temperatures to and from Celsius, Fahrenheit.   | CO4           |
| 9.     | Write a Python script that prints prime numbers less than 20.   | CO5           |
| 10.    | Write a python program to find factorial of a number using Recursion.   | CO5           |
| 11.    | Write a program that accepts the lengths of three sides of a triangle as inputs.<br>The program output should indicate whether or not the triangle is a right triangle<br>(Recall from the Pythagorean Theorem that in a right triangle, the square of one<br>side equals the sum of the squares of the other two sides).   | CO5           |
| 12.    | Write a script named copyfile.py. This script should prompt the user for the names of two text files. The contents of the first file should be input and written to the second file.  | CO4           |
| 13.    | Write a program that inputs a text file. The program should print all of the unique words in the file in alphabetical order.  | CO4           |
| 14.    | Write a program to generate different sinusoidal signal and plot it using Matplotlib.   | CO5           |
| 15.    | Using scipy's quad function, write a program that solves the following integral numerically: $I = \int_0^1 \cos \cos (2\pi x) dx$ .   | CO6           |
| 16.    | <ul> <li>Write a function with name plotquad which takes the same arguments as the quad command (i.e. f, a and b) and which</li> <li>(i) creates a plot of the integrand f(x) and</li> <li>(ii) computes the integral numerically using the quad function. The return values should be as for the quad function.</li> </ul> | CO6           |
| 17.    | Write a python program to retrieve elements of an array using indexing, sort<br>them in order. Also write a program to print stars to form a right-angled triangle<br>and equilateral triangle  |               |
| 18.    | Write a python program to find the transpose of a matrix and to multiply two matrices.  |               |
| 19.    | Write a Python program to calculate gross salary and net salary of employee.<br>Take user input for basic salary. Gross salary= basic +DA+HRA; Net salary=<br>Gross salary-PF-Income tax. DA is 80% of basic salary; HRA 15% of basic; PF<br>is 12% of basic; Tax is 10% of gross salary.                                   |               |

# Term Work:

Term work should consist of 10 experiments.

Journal must include at least 2 assignments.

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.

#### **Total 25 Marks**

(Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks)

#### Semester IV

| Course<br>Code | Course Name        | Teaching<br>Scheme<br>(Contact Hours) |       | Credits Assigned |       |     |           |

| Course Code | Course Name     | Credits |
|-------------|-----------------|---------|
| ARM401      | Mini Project-1B | 02      |

| Course Objectives: |   |  |  |  |
|--------------------|---|--|--|--|
| 1)                 | To acquaint with the process of identifying the needs and converting it into the problem.                     |  |  |  |
| 2)                 | To familiarize the process of solving the problem in a group.   |  |  |  |
| 3)                 | To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems. |  |  |  |
| 4)                 | To inculcate the process of self-learning and research.   |  |  |  |

| Course ( | Course Outcome: Learner will be able to  |  |  |
|----------|--|--|--|
| 1)       | Identify problems based on societal/research needs.  |  |  |
| 2)       | Apply Knowledge and skill to solve societal problems in a group.                                   |  |  |
| 3)       | Develop interpersonal skills to work as a member of a group or leader.                             |  |  |
| 4)       | Draw the proper inferences from available results through theoretical/experimental/simulations     |  |  |
| 5)       | Analyze the impact of solutions in societal and environmental context for sustainable development. |  |  |
| 6)       | Use standard norms of engineering practices  |  |  |
| 7)       | Excel in written and oral communication.   |  |  |
| 8)       | Demonstrate capabilities of self-learning in a group, which leads to lifelong learning             |  |  |
| 9)       | Demonstrate project management principles during project work                                      |  |  |

| Guidelines for Mini Project |   |  |  |  |
|-----------------------------|---|--|--|--|
| 1)                          | Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity. |  |  |  |

| 2)  | Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.   |
|-----|--|
| 3)  | Students' hall submits implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.  |
| 4)  | A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.   |
| 5)  | Faculty supervisor may give inputs to students during mini-project activity; however, focus shall be on self-learning.   |
| 6)  | Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/supervisor.   |
| 7)  | Students shall convert the best solution into working/ software model using various components of their domain areas and demonstrate.  |
| 8)  | The solution to be validated with proper justification and report to be compiled in the standard format.   |
| 9)  | With the focus on the self-learning, innovation, addressing societal problems and<br>entrepreneurship quality development within the students through the Mini-Projects,<br>it is preferable that a single project of appropriate level and quality to be carried out<br>in two semesters by all the groups of the students. i.e., Mini Project 1 in semester III<br>and IV. Similarly, Mini-Project 2insemesters Vand VI.                   |
| 10) | However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini-Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case-by-case basis. |

| Guidelines for Assessment of Mini-Project:<br>Term Work |  |  |
|---|--|--|
| 1)  | The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester. |  |
| 2)  | In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.                         |  |

| 3) | Distribution of Term work marks for both semesters sha | all be as below; |
|----|--|------------------|
|    | Marks awarded by guide/supervisor based on logbook     | 10 Marks         |
|    | Marks awarded by review committee                      | 10 Marks         |
|    | Quality of Project report                              | 05 Marks         |

Review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines.

# **One-year project:**

- In first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on presentation given by students group.
  - First shall be for finalization of problem
  - Second shall be on finalization of proposed solution of problem.
- In second semester expected work shall be procurement of components/systems, building of working/software prototype, testing and validation of results based on work completed in an earlier semester.
  - First review is based on readiness of building working prototype to be conducted.
  - Second review shall be based on poster presentation cum demonstration of working/software model in last month of the said semester.

# Half-year project:

- In this case in one semester students' group shall complete project in all aspects including,
  - o Identification of need/problem
  - Proposed final solution
  - o Procurement of components/systems
  - Building prototype and testing
  - Two reviews will be conducted for continuous assessment,
    - First shall be for finalization of problem and proposed solution
    - Second shall be for implementation and testing of solution.

| Assessment criteria of Mini-Project.<br>Mini Project shall be assessed based on following criteria; |   |  |
|---|---|--|
| 1)  | Quality of survey/need identification                                       |  |
| 2)  | Clarity of Problem definition based on need.                                |  |
| 3)  | Innovativeness in solutions   |  |
| 4)  | Feasibility of proposed problem solutions and selection of best solution    |  |
| 5)  | Cost effectiveness  |  |
| 6)  | Societal impact   |  |
| 7)  | Innovativeness  |  |
| 8)  | Cost effectiveness and Societal impact                                      |  |
| 9)  | Full functioning of working model as per stated requirements                |  |
| 10)   | Effective use of skillsets  |  |
| 11)   | Effective use of standard engineering norms                                 |  |
| 12)   | Contribution of an individual's as member or leader                         |  |
| 13)   | Clarity in written and oral communication                                   |  |
|   | • In one vear, project, first semester evaluation may be based on first six |  |

criteria's and remaining may be used for second semester evaluation of performance of students in mini project.

• In case of **half year project** all criteria in generic may be considered for evaluation of performance of students in mini project.

| Guidelines for Assessment of Mini-Project Practical/Oral Examination: |  |  |  |
|---|--|--|--|
| 1)  | Report should be prepared as per the guidelines issued by the Department.  |  |  |
| 2)  | Mini Project shall be assessed through a presentation and demonstration of<br>working model by the student project group to a panel of Internal and External<br>Examiners preferably from industry or research organizations having experience<br>of more than five years approved by head of Institution. |  |  |
| 3)  | Students shall be motivated to publish a paper based on the work in Conferences/students competitions.   |  |  |

| Mini Project shall be assessed based on following points; |  |
|---|--|
| 1)  | Quality of problem and Clarity                               |
| 2)  | Innovativeness in solutions                                  |
| 3)  | Cost effectiveness and Societal impact                       |
| 4)  | Full functioning of working model as per stated requirements |
| 5)  | Effective use of skillsets                                   |
| 6)  | Effective use of standard engineering norms                  |
| 7)  | Contribution of an individual's as member or leader          |
| 8)  | Clarity in written and oral communication                    |
