

# Vivekanand Education Society's Institute of Technology

(Affiliated to University of Mumbai, Approved by AICTE & Recognized by Govt. of Maharashtra)

## Criteria 1.3 : Curriculum Enrichment

### Department of Computer Engineering

1.3.3 Percentage of students undertaking project work/ field work/ internships (Data for the latest completed academic year) -2021-22

- Number of students undertaking Project Work in their Final Year of Computer =213
- Number of students undertaking Mini Project in First,Second & Third Year Levels in UG Programme = 193+213+207= 613
- Number of Students undertaking Internship =153
- Total No.of Students enrolled in 2021-22 in Computer = 826

Formula:

$$\frac{\text{Number of students undertaking project work /field work / internships}}{\text{Total number of students}} \times 100$$

- Percentage of Students Undertaking Project Work/Field Work/Internships =  $(193+213+207)/826 = 100 \%$

## TECHNOTREON INTELLECTUAL VENTURES

TO WHOMSOEVER IT MAY CONCERN

Date: - 29th January 2022

This is to certify that **Shubhangi Zope** of Vivekanand Education Society's Institute Of Technology has successfully completed her work-from-home internship with **Technotreon Intellectual Ventures** as an **Associate Web Developer** during the period 7<sup>th</sup> July 2021 to 7<sup>th</sup> January 2022.

During this period, she has worked on our spinout startup project related to interconnected gym equipment technologies and has been very successful in her research endeavors. Her contribution has been paramount to the initial development of the app and the website. She has shown immense potential in backend software development for consumer facing software products.

During the course of internship, **Shubhangi Zope** has shown great amount of responsibility, sincerity and a genuine willingness to learn and zeal to take on new assignments & challenges. In particular, her coordination skills and communication skills are par excellence and her attention to details is impressive.

We wish her all the very best for her future.

With regards

Akhil Singhal  
Head of Research and Development

## CERTIFICATE

OF COMPLETION

IS PRESENTED TO :

**Nikita Narwani**

For his/her achievements and participation at Ace Writers Hub. We take this opportunity to wish him/her all the best the future.

07th Feb, 2022

Certification Date

Vishal Changlani  
PROJECT DIRECTOR

## Certificate of Internship

### TO WHOM IT MAY CONCERN

This is to certify that **Ms. TITHI JHAMNANI** has completed internship programme on "**Content Writer**" from 06.12.2021 to 05.01.2022.

She took keen interest in the work assigned and successfully completed it. During the period of internship we found her to be punctual, hardworking and inquisitive.

We wish her luck and success in all her future endeavours.

## TECHNOTREON INTELLECTUAL VENTURES

TO WHOMSOEVER IT MAY CONCERN

Date: - 29th January 2022

This is to certify that **Shubhangi Zope** of Vivekanand Education Society's Institute Of Technology has successfully completed her work-from-home internship with **Technotreon Intellectual Ventures** as an **Associate Web Developer** during the period 7<sup>th</sup> July 2021 to 7<sup>th</sup> January 2022.

During this period, she has worked on our spinout startup project related to interconnected gym equipment technologies and has been very successful in her research endeavors. Her contribution has been paramount to the initial development of the app and the website. She has shown immense potential in backend software development for consumer facing software products.

During the course of internship, **Shubhangi Zope** has shown great amount of responsibility, sincerity and a genuine willingness to learn and zeal to take on new assignments & challenges. In particular, her coordination skills and communication skills are par excellence and her attention to details is impressive.

We wish her all the very best for her future.

With regards

**Akhil Singhal**  
Head of Research and Development

## Abstract

Food is an essential parameter that plays a crucial role in the survival of humans. It is also significant in depicting a country's culture. Healthy, nutritious, and high-quality food results in a better lifestyle and develops a person's immunity and health. Correspondingly, the consumption of low-quality food, which might be deprived of nutritional value, negatively impacts a person's health and makes them susceptible to various diseases. There is a persistent complaint in India, in any civic body-related food section about the quality of meals available. Likewise, the oil quality is also an essential factor while cooking any meal as it affects the taste of food, and the use of rancid oils in cooking may also be harmful to health. Therefore, the quality of oil used in frying the food must be monitored. Its continuous exposure to relatively high temperatures results in degradation of its merit. This study aims to build an application to determine the food quality and detect repeated frying on cooking oil based on its visual properties. Classification of food items is done based on time left for consumption, edibility, condition, color, and rancidity. The food items are additionally classified as stale or usable using artificial intelligence algorithms based on the images acquired through a smartphone's camera.

## Problem Statement

Food Safety and quality detection are an important portfolio in today's world. Commuters around the world travel daily for their work, therefore, these people have to eat food at canteens, pantries, and restaurants. However, the real problem arises when the quality of the food served in these places is questionable. According to the Financial Express, Food Safety and Standards Authority of India (FSSAI) invests \$20 million annually for the safety and maintenance of the standard of food in India. Despite this heavy investment, food-borne diseases impose a \$15 million cost on India annually. This stresses the need for an efficient and accurate food quality detection system. The basis of the contemporary food quality detection systems classification is only through image processing of the food items in contention, disregarding other factors such as the rancidity and usability of the cooking oils used. There is also an element of instability in the outcomes produced by the available products in the market. Thus, resulting in a lack of efficiency and accuracy.

## Proposed Solution

Our proposed solution is to collectively use a CCD camera and a pH sensor to acquire high-quality images of food and to determine the pH of the food and to detect the freshness of the food. This analysis will be done using Image processing and AI. Our solution helps in determining the quality of food by combining factors like rancidity, staleness, and build-up of any sort of visible bacteria.

## 8.1 Limitations:

- Currently, the classification of the freshness of food items is limited to fruits and vegetables, and does not include other common food items such as bread.
- The calorie calculator feature tells the ideal calorie intake for a person based on gender only, and does not consider other factors such as age, height and weight.
- The heart disease map only gives information about popular Indian foods that may contribute to heart disease, and does not include foods from international cuisines.

## 8.2 Conclusion:

The proposed system will solve the problem of uncertainty of the quality of food and oils and will prove to be greatly useful as it will greatly reduce the risks of health related problems occurring from consumption of stale food, or from cooking food in rancid oils. The nutritional analysis feature will help people to keep track of their nutrient intake based on the foods that they consume throughout the day. Users can find the required amount of nutrients as per the daily calorie intake and can also find their ideal calorie intake as per their gender. This feature and the nutritional analysis feature will be impactful in helping people to consume an ideal healthy diet. Most people are unaware of the harmful combinations of foods. The food compatibility matrix will solve this issue by making people aware of these combinations, thus helping them to follow a healthy diet. The IFCT demographics feature would inform people about important nutrition-related information, such as the food items having highest amounts of certain nutrients, nutritional evaluation of non-vegetarian foods, and correlations between the presence of different nutrients in food. Using the medical condition demographics feature, people suffering from certain extremely common medical conditions would be able to get dietary suggestions in order to cure the condition or keep it in control. The system would thus be tremendously impactful in helping people to consume fresh and nutritious food, and also to maintain a healthy balanced diet according to their own requirements. Also, the system is convenient and inexpensive, therefore it will be easily accessible to people for everyday use.

## Proposed Evaluation Measures

There are various parameters on which the food authorities of various countries are dependent some of those are as follows:

- Accuracy of the Algorithm employed: The Algorithm or the model of classification has to be selected on the basis of the statistical analysis and initial visualization of the collected data and the eclectic dataset that is formed. The selected algorithm should be able to provide highly accurate classifications over the intended testing datasets.
- Matching the Expected Results: The Outcomes produced by the model should not deviate from the anticipated results.
- Parameters used by Food Quality detection Officers:
  - a. Ingredient Quality - The quality of ingredients used for cooking is an important parameter that has to be considered for the evaluation of the edibility of a particular food item.
  - b. Nutritional Requirements - The Food Item under consideration has to satisfy certain nutritional requirements posited by food security and safety officers.
  - c. Sanitation Requirements - The tools used for cooking should maintain certain cleanliness standards required for the prevention of the growth disease-causing germs in the food items.
- Match or better Existing better: It is important to improve upon the existing models and systems which are being used for quality detection in order to minimize the shortcomings of the contemporary systems.

## Conclusion

The yield of our project will be a mobile application working in unison with the algorithm on a server. This would enable a user to upload an image of the food item through the mobile application and get results within seconds. This will not only enable the developers to make changes remotely in the future but also divide the computing power needed. The UI of the application would be user friendly and a person will be able to readily use it with ease. This will let the user get an opportunity to explore the areas on their own.

## 1. INTRODUCTION

### 1.1 Introduction

This is a project based on product designing and development. We are creating a website for automated status generation of college due clearance form for pass out students. This will help the teachers to clear the dues from different departments in no time and in one go.

The is automated status generation of college due clearance form for pass out students record management and informative system that provides up-to-date information about all the students. This includes the number of students passed out with clearing the dues from college, eligible for higher studies, interested. Thus managing so many fields becomes a tedious chore. This system helps the college to overcome the difficulties in managing hundreds of student records and searching for a student eligible for giving a green signal for clearing dues criteria.

The increasing advantages of the record systems now are at the highest position thus many manual processes are effectively managed. The system which is of major importance is the automated status generation of college due clearance form for pass out students for campus recruitment. The use of the Internet and the World Wide Web has revolutionized the provision of information and the facility for the user to take action on the information obtained. This led to a unique web-based placement record system. The administrator registration is enabled. This system would maintain the student data, sort them according to the percentage, and even generate a status. Complete statistical data would be stored and managed effectively with less time consumption.

## 3.6 Conclusion and Future work:

So , after looking at the present situation of clearance form and its drawbacks we have tried to eradicate most of it. In future we wish to incorporate more such things with the website. Any paper work can be brought online and made easier.

The project “Automated status generation of College Due Clearance for pass out students” as the name suggests it is a web-based record system where due records and related details of our college can be stored. Reports are generated statistically. Basically, our system is login restricted which directs us to the home page that contains five main web pages, they are about the student's departments, their section, excel sheet containing their name, clearance record, marks submission button and for viewing the status. The proposed online placement record system covers all the processes like interesting, updating, searching. It provides a detailed solution to the limitations of the existing system.

In the proposed Web-based placement record system there is scope for improvement of the system. The system is not providing Email integration. Hence, it can be modified to give Email integration. In the future, we can place the system on the cloud so the maintenance of the data can be reduced. The due clearance system will integrate with the online system so the students status can be generated automatically.
