

## Criteria 1.3 : Curriculum Enrichment

### Department of Electronics

#### 1.3.3 Percentage of students undertaking project work/ field work/ internships (Data for the latest completed academic year) -2022-23

- Number of students undertaking Project Work in their Final Year of Electronics =105
- Number of students undertaking Mini Project in Second & Third Year Levels in UG Programme = 63+69= 132
- Number of Students undertaking Internship =27
- Total No.of Students enrolled in 2022-23 in Electronics= 237

Formula:

$$\frac{\text{Number of students undertaking project work /field work / internships}}{\text{Total number of students}} \times 100$$

- Percentage of Students Undertaking Project Work/Field Work/Internships =  $(63+69+105)/237 = 100 \%$

## CERTIFICATE OF INTERNSHIP

This Certificate Is Proudly Presented to

**AVANTI RANGDAL**

Has successfully completed Internship on VLSI  
at LearnWik Solutions Pvt Ltd for the period of two months from  
JUN 5th 2023 to AUG 5th 2023.

**Certificate No : AUG039**

**Issue Date :05/08/2023**

**Rupesh Jada**  
Operational Head

# Vivekanand Education Society's Institute of Technology

(Affiliated to University of Mumbai, Approved by AICTE & Recognized by Govt. of Maharashtra)

## ABSTRACT

Automated answer checking and feedback generation systems have the potential to revolutionise the way students learn and teachers grade exams. In this project, we created an AI-based answer checker that can assess student responses and give them timely performance feedback. Advanced natural language processing techniques are used by the system to distinguish between various handwriting styles and patterns, extract pertinent information from text, and compare user input with the anticipated result. The technology can be integrated with learning management systems used by educational institutions and has the potential to offer multilingual support as well. Students can submit their response, evaluate feedback, and request more help via the user interface. The system's ability to identify common errors and its provided evaluation can also help students improve their performance and understanding of the subject matter. Additionally, by examining user feedback and changing the system's algorithms and models, the system continuously learns and enhances its accuracy. The overall goal of this approach is to improve learning and make grading more effective and efficient for both teachers and students.

## 1.1 Introduction

Bluetooth is a wireless technology that allows for communication between devices over short distances. It is commonly used in a variety of applications, including hands-free headsets, wireless keyboards, and audio streaming.

Hand gesture control pushcar is a modern and innovative way to control a remote-controlled car. This type of car is controlled by hand gestures made by the user, rather than a traditional remote control. The user can move their hand in specific ways to control the car's movement, such as forward, backward, left and right.

When these two technologies are combined, it opens up a world of possibilities for remote control devices. By using Bluetooth technology, a hand gesture control pushcar can be controlled from a smartphone or other compatible device, making it more accessible and convenient to use. This type of technology is becoming increasingly popular in the field of robotics and can be used for a wide range of applications, including education, entertainment, and even industrial automation.

## 1.2 Problem Statement

The problem statement for a Bluetooth and hand gesture control pushcar is to design and develop a system that allows users to control the movement of the pushcar wirelessly through a Bluetooth connection and hand gestures. The system should be able to accurately interpret hand gestures and translate them into corresponding movements of the pushcar. Additionally, the system should be reliable and user-friendly, allowing users of all skill levels to easily operate the pushcar without the need for extensive training or technical knowledge. The system should also be robust and able to withstand normal wear and tear associated with regular use.
