Wedding Bells

-Pranav Phale

Priti Anish Maduskar at their marriage ritual

The month of April rings in the wedding bells for **Ms. Priti Kale**, who works in the administrative department at VESIT. She tied the knot with Mr. Anish Maduskar on 18th April, 2019. VESIT Connect congratulates the couple and wishes them a happy married life.

"Family isn't always blood. It's the people in your life who want you in theirs; the ones who accept you for who you are. The ones that would do anything to see you smile and who love you no matter what."

—Winston Churchill

VESIT Ranked #1 by EWIPEIR in Maharashtra

-Tanvi Shinde

Every year Education World releases a PAN India ranking of the top 100 Private Engineering Institutions. Education World India Private Engineering Institutes Rankings (EWIPEIR) is a list preparing against the backdrop of the plummeting standards of engineering institutes. The major cause of this issue is the reckless licensing of private engineering colleges over the past two decades by the AICTE. The number of private engineering colleges doubled from 1,511 in 2006-07 to 3,415 in 2018-19. This list excludes IITs and NITs which are heavily subsidized by the Central Government. The list rates the college on the parameters of excellence including the competence of Faculty, Placements, research and innovation, curriculum and pedagogy, industry interface, rate for money, infrastructure, faculty welfare, leadership and governance and aids in the selection process of the students in order to find a more suitable college for themselves.

BITS, Pilani secured the first place in this list followed by IIT, Hyderabad and VIT. VESIT ranked #1 in Maharashtra and #24 nationally and labelled as a "rigorously administered" institute. Delighted

VESIT ranked #1 in state

by this, Principal, Dr.J.M.Nair said, "We have great respect for the annual EWIPEI Rankings which are based on the assessment of knowledgeable leaders of industry and academia as also senior students in higher education. It is a public acknowledgement that we provide high-quality industry-relevant engineering education to our students. VESIT has applied to the University of Mumbai for autonomy status, which we hope to get soon. Autonomous status is important because it will give us full freedom to update our curriculums, strengthen industry linkages, introduce interdisciplinary courses and focus on research, innovation and entrepreneurship."

VESAITHON - AI for society

-Aditya Srivastava

VesAlthon, a Hackathon, initiated by Leading India AI is going to be hosted by and in VESIT on June 28 and 29. VesAlthon'19 was proposed to make an impact on the community by building a workable AI solution for some of the most pressing Social Challenges faced by Senior Citizens, Differently abled and Kids.

This event aims to bring together the country's best coders, developers, designers, innovators, creators and entrepreneurs. VesAlthon'19 was conducted for all those who are passionate about building, designing and innovating.

It has two phases :

Online Ideation Phase

Onsite Hackathon (24 hours)

The event not only had a good organizing team but also very good sponsors. Some of the sponsors include Capgemini, LeadingIndiaAI, network-marvels and Adapt. Vice Principal, Dr Vijayalakshmi M, Dr. Shalu Chopra, Mrs Sangeeta Oswal, Mrs Lifna C S, Mrs Vidya Pujari were the faculty members of the organising team. Ravikumar Soni, Rupesh Juyal, Rupesh Juyal, Deepa Narayanan, Gayatri Ganapathy and Vishal Israni were the student members of the organising team.

The structure of the competition comprised of three

categories namely: Developing AI Assistant For Senior Citizen, Differently Abled People & Kids. Each category has three problem statements thereby leading to nine problem statements.

Participation is team-based, with a minimum team size of two to a maximum of four. During the ideation phase, the enthusiasts had to submit their project ideas on ppts. Once shortlisted, the Team Leader had to go through a telephonic round. The deadline to submit proposals was 15th April 2019 which was then extended by a week due to the enormous response of teams that registered for the event. Looking at the response received for the event, it is bound to be a huge success. Now only time can tell how the long-awaited event turns out to be.

Misty eyes as General Secretary bids Farewell

-Aadi Fernandes

As Shubham Safaya, bids farewell and signs off from his term as General Secretary of VESIT for the year 2018-19, we captured a few glimpses of his journey:

"I have the most difficult task to do today since I have to describe four years of my college life in merely 5 minutes. The first day I stepped into our college, I was inspired by the then General Secretary, Ravi Subu and had set my goal to get into his position, and today I couldn't be any prouder to be addressing you.

Coming from a small town in J&K to VESIT, I thought that the transition would be extremely difficult. But thanks to my classmates, hostelites and the teachers who helped me through thick and thin, I managed to settle in quickly. Living away from my parents taught me how to handle tough situations and take quick decisions because in life we don't always get enough time to sit and think. Socializing in college helped me become the deputy cultural secretary in my second year, the same year in which I was a part of the sponsorship committee of our technical event PRAXIS.

Managing events as well as maintaining good grades is the most difficult part, and it took me a while to

maintain that balance. Prioritizing things can help you with time management, this is what I learned in my four years of college life. Campaigning is a breath-taking part in the process of elections as people who vote (CRs) for you, judge you on the basis of the speech you give and the way you answer the rapid-fire questions that are thrown at you.

A year later, on 31st July 2018 elections for the academic year, 2018-19 were being held and I was competing with two other students. I always had a feeling that winning was never on the cards as from the previous records you can see that VESIT never witnessed a General Secretary neither from my hometown Jammu nor from my department (EXTC). Thanks to everyone who voted, it was a humongous win. Special thanks to my class, D19B, without whose support, this dream would have never turned to reality.

As you all know with great position comes great responsibility! It was never easy for me, as there are a number of events that take place in our college every year including PRARAMBH, SPHURTHI, BLISS, UMEED, OCTAVES and UTSAV. Not only this, there was a team of more than 50 students lead by me and a small mistake could create huge complications. I soon learnt that keeping calm is the only

thing that can help you handle these kinds of situations. Also, all the council and societies were more like friends and family who helped operate all events smoothly. One of the best thing about VESIT is that you don't have seniors or juniors here, you just have friends.

Shubham Safaya

My personal suggestion to everyone would be to perpetuate good attendance, maintain good grades. Teachers are always amiable, they will assist you in any kind of situation. Take part in co-curricular as well as extra-curricular activities, maintaining an equilibrium between all these will surely improve your management skills, which is required when you sit for placements or even if you go for further studies. Believe in yourself, and have a never give up attitude; it will help you grow up. Have goals in life as it will nourish your career. Always remember, the eminence of the post is evanescent but following a diligent behaviour always gives you a euphoria.

A day in the life of an MP

-Avinash Tripathy

2019, the year of the Lok Sabha elections in our country. India, the largest democracy in the world had its elections with an estimate of potential 900 million voters eligible to vote. At a time like this, most of the population goes thinking about whom to cast their vote for, contemplating which political party deserves their vote, we as citizens of this great nation mostly are unaware of one big thing, how does the Lok Sabha function? Now many media sources cover the process of elections and explain its

process but not many people know about the framework on which the Lok Sabha has been functioning since Independence. Just like few of our readers will be scratching their heads as to how the Lok Sabha really functions, a few law students from the D.Y. Patil College of Law also had the same epiphany and held a Mock Parliament on March 3, 2019. Four students from VESIT, Sparsh Khosla of D5, Himesh Shadiza of D4A, Hemkesh Raina of D5 and Avinash Tripathy of D4B participated and secured various accolades.

The Mock Parliament was a mock session of the lower house of the Indian Parliament, the Lok Sabha. Sparsh Khosla was invited to be the speaker of this Lok Sabha session. The participants were allocated various Member Of Parliaments for the day. Himesh Shadiza of D5 was the Honorable Prime Minister of India, Narendra Modi of the BJP, Hemkesh Raina of D5 was Farooq Abdullah of NC and Avinash Tripathy of D4B was Kiren Rijiju of BJP. The agenda to be discussed was "Review of the NDA policies over the

Himesh Shadiza as the Hon. PM

last 5 years with a special emphasis on economic and foreign policies”.

Before the session began, the speaker explained the basic framework that would be followed in the Lok Sabha during the session. This was followed by a roll call of the ministers present and the selection of the leader of the Ruling and the Opposition when it was noted that certain no shows were there. Among the no shows were a few people who had been given key portfolios like Arun Jaitley and Nirmala Sitharaman and Mallikarjun Kharge. Their presence in the committee was a must for a healthy discussion or to be more precise, their portfolios were very important that their absence couldn't be ignored. In a situation like this, the speaker of the house left it upon the discretion of the MPs to decide amongst themselves to shuffle the portfolios amongst themselves. After a few reshuffles, it was decided that the following roles would be played:

1. Leader of Ruling- Narendra Modi
2. Leader of Opposition-Shashi Tharoor
3. Defense Minister-Kiren Rijiju
4. Finance Minister-Piyush Goyal

The first session was the Question Hour wherein the MPs of the Opposition question the MPs of the ruling. The questions are either directed directly to the MP or their portfolio if they hold one. In some cases, the entire ruling party can be questioned. The most enjoyable part of this session was that everyone present in the room got to see many unique things. For starters, the question posed by the Shashi Tharoor towards our Prime Minister was so difficult to understand, even the speaker of the house couldn't understand what the question was and thus requested Shashi Tharoor to rephrase the question twice. Another thing that grabbed eyeballs and made the

opposition gasp in surprise was when our honourable prime minister answered the questions posed to him. For a person who has never addressed a press conference as the PM of India, this act surely caught the eyeballs of many people present.

The question hour was followed by the Zero Hour. Zero Hour is called so because it starts at 12 pm or according to the clock at Lok Sabha at 00:00:00. During this session, matters of urgent importance are discussed without following any proper framework. Every time an act of indiscipline has occurred in the Lok Sabha, it happens in the Zero Hour. Zero Hour is very loud and unmoderated as the speaker's duty during these hours is not explicit in the constitution and hence they abstain from doing anything until things go really out of control. After the highly chaotic Zero Hour, the actual agenda's discussion started in the form of motions being raised by both sides and the level of discussion that started here was quite an enriching experience for all the delegates. The MPs of the ruling came up with quite strong grounds that applauded the government's achievements while slyly passing sarcastic remarks about the times when the opposition was in power. Every point was countered quite well and a few great remarks were made by the opposition on the current government. The ruling talked about foreign policies and its success in making India stronger than ever which was countered by opposition raising internal conflicts showing how big the divide has become in the past 5 years. Another great example was when Opposition talked about the Rafale deal which was countered by the Ruling by citing examples of its reactions to acts of terrorism on our nation.

Many discussions later, the speaker of the house also introduced an imaginary emergency in the committee to provide the MPs with truly a unique experience. It was quite an energetic discussion when the emergency was discussed. The speaker requested the

Sparsh Khosla as The Speaker

Avinash Tripathy as the Defense Minister

leaders of the ruling and opposition as well as the defence minister and Mr Farooq Abdullah as the emergency was regarding a military conflict in the disputed Kashmir region. The statements provided by the MPs were quite bold which impressed the speaker. After the statements regarding the emergency, the speaker requested for closing statements from each side after which the committee was finally adjourned. After a day of such an intense and enriching level of debate, it was quite difficult for the judges to choose their winners but they had to make some tough choices.

And so, Avinash Tripathy of D4B, Himesh Shadiza of D4A and Hemkesh Raina of D5 received Honorable mentions for their performance in the committee. When asked about their experience, Hemkesh Raina of D5 says “It was a very learning experience for me, for a first timer specially. It was great opportunity to learn from experienced participants and I feel very motivated to participate in future Mock Parliaments.”

Achievements like these not only increase the confidence of the participants to speak but also to explore this field more, a field that is highly criticized and makes people think twice before even entering it: Politics. We hope to see many more students of VESIT being encouraged to explore the field of politics; for it is us, the youth who are the future of this nation and we must know how our country functions and how it ought to be run.

It was a great opportunity for the participating students to brush up on their oratory skills too. This event encouraged on the spot and critical thinking. It helped the young adults to understand the dynamics of politics.

Hemkesh Raina as Farooq Abdullah engaged in conversation regarding Kashmir

The speaker during Zero Hour

A glimpse of the Zero Hour

VESIT Voice

-Gayatri Belapurkar

Hello VESITians! We haven't been able to keep up with the galloping time, but we shall recover soon. This issue is sure to bring to you some of the news that you may have missed. This year, yet again, the college has been ranked as one of the Top 10 Private Institutes of India by Education World. That is indeed an honour for everyone at VESIT, who have kept up with the passing times. With the scorching May heat upon us and the exam fever rising at a pace much faster than the temperatures, another semester is nearing its end. And with the end of the even semester comes the termination of another academic year, and along with that, the signing off of the term of the elected Student Council for the year. With the General Secretary of the college, Shubham Safaya bidding goodbye, we have him speaking about his journey in the past year. As the college preps up for the upcoming AI hackathon, VesAIthon, we bring to you its status this month. VESITians have also shone at yet another Mock Parliament. The month of May marks Labour Day and we bring to you a few facts about its whys and hows. This month in the Diaries section we have Mr. Anand Vora. Keep reading to find out what he has to say!

"You Cannot Escape The Responsibility Of Tomorrow By Evading It Today."

Labour Day

"No man is paid for having a head and hands, but for using them." -Elbert Hubbard

Call it May Day, Workers' Day, Kamgar Din or Uzhaipalar Dinam. The 1st of May is celebrated nationwide and in many countries as a Day for recognizing the toil of the working class.

It all started back in 1886, in Chicago, when the labourers had to work for 15 long hours to make ends meet. The workers joined in a mutiny, demanding 8 hours work and acceptable working conditions on the 1st day in the month of May. This movement spread throughout the world and came to India in 1923 when it was first celebrated in Chennai. In the present day, we enjoy rights like weekends, pensions, vacations, maternity leaves, thanks to the Labour Movement. On the flip side of the coin, there are countless cases of people giving in to laziness and resorting to shortcuts, cheating and anything that can save them of those dreadful hours of work. As convenient as that seems, it does no good to them, their community or the whole world.

And then there are the ones who look down on the "easier" or less respectable disciplines. 'Dignity of labour' is the mantra they, along with all of us ought to follow.

In India, Labour Day is a public holiday held on every 1 May. It is celebrated as Antarrashtriya Shramik

Labour Day parade in Atlanta in the 19th Century

Diwas. The holiday is tied to labour movements for communist and socialist political parties. Labour Day is known as "Kamgar Din" in Hindi, "Karmikara Dinacharane" in Kannada, "Karmika Dinotsavam" in Telugu, "Kamgar Divas" in Marathi, "Uzhaipalar dhinam" in Tamil, "Thozhilaali Dinam" in Malayalam and "Shromik Dibosh" in Bengali. Since Labour day is not a national holiday, Labour day is observed as public holiday at State Government's discretion. Many parts especially in North Indian States it's not a public holiday. The first May Day celebration in India was organized in Madras (now Chennai) by the Labour Kisan Party of Hindustan on 1 May 1923.

This May Day, as we enjoy a national holiday, let us be aware of the hardships still faced by many of our fellow citizens and keep in mind the famous Greek saying-

No work is disgrace, the disgrace is idleness.

Musings and Expressions

The Begging Bowl

-Ananya Chetlur

Iwalked by the station today morning and I saw a beggar, one among millions in our country, sitting with his palm outstretched, pleading passersby to spare coins or whatever little money they could from their overly surplus budgets.

Not many people spared him a look, and on normal days, maybe I wouldn't either, for we have truly stepped into the Kaliyuga, and the lives of others matter moot to us, no matter how much we posture about women empowerment and child education. But on this particular day, somehow, my roving gaze landed on his begging bowl, and in there I saw a picture, a small frame containing a filigreed photo of one of the thousands of deities worshipped in this ridiculously polytheistic country of ours. And in that

moment, suddenly, I was infuriated.

"How!?"

I wanted to scream.

"How are you so devout, when you have nothing? Do you not see your God has forsaken you? How can you still believe? I, having more than I could ever ask for, still meander through time, a godless soul, and you, having barely enough to survive, still ask with His name on your lips! How?"

And in that moment, he turned towards me and smiled. And I felt truly humbled. This man, sitting on the rough, unfinished pavement, had one thing I would probably never have. Satisfaction. I think all us millennials can take a lesson in life from that man. Be ambitious, but be happy with what you have.

Count your blessings, for there are always more with far fewer.

Still overwhelmed, I wanted to ask that man why he hadn't lost hope. I wanted him to let me partake of his endurance, for maybe then I would probably be a better person. But I had not the heart to ask, because even this wish of mine was a shameless selfish desire. I walked away with my mind in chaos, but I turned around and saw him one last time, and somehow felt optimistic for him. His bowl may have been empty, but his eyes were full of dreams for a better tomorrow.

Terribly Tiny Tales

1. She had numerous plastic surgeries, expensive make-up, extensive hair dying, and all the wealth in the world. Yet, it wasn't until she married a middle-class man with two children and a 9-5 job, did she realise the beauty in all things old, including her reflection in the mirror.

-Gauri Surve
2. Dinners, parties; she took me everywhere. It's been days she hasn't picked me. Maybe favourite watches don't stay favourites when OLD.

-Ishwari Zare
3. Dear justice, If your delay is your denial, then was my battle a worthless trial? Yours, Arushi Talwar

VESIT Diaries

Mr. Anand Vora, an alumnus of VESIT, proudly belongs to the First Batch of VESIT (Batch of 1988, Dept of Electronics Engineering). He is currently the Vice President at Tech Mahindra and is responsible for Delivery oversight for High Tech companies in U.S.A West Coast region. He has been a part of the Tech Mahindra family for the past 21 years. At TechM, he has played several roles; from developer, analyst to telecom domain consultant. He has led delivery programs for clients in U.K, Europe and U.S.A, led technical pre-sales and lead some new initiatives as well.

Q. Tell us something about your college life at VESIT.

I would say that it was the most amazing and fantastic part of life besides being special. I was part of the first VESIT 1988 pass out batch, which made it most amazing! The college grew and went on build-

ing as we went on into the next semester and year. The building was being constructed, library getting stocked with books, first cafeteria - which was a small “tapari” on the campus. Teaching Staff as much new as we were. There was no legacy, no past baggage and everything was “first time” for all; including the college rules which got framed as soon as we broke some norms. Lectures’ schedule was done based on staff and students’ availability and in consultation. Struggle with subjects, syllabus, labs, viva.... all being tried on us as guinea pigs; however, we were the willing ones and we indeed enjoyed the ride! There was no barrier between students of the then 3 streams – Computers, Electronics and Instrumentation. All 180 students knew each other. I bet there will be very few who will get this kind of fun and get to experience as part of their college life. There are several many more spicy stories and exploits which are meant to be told over a coffee. It’s etched forever in the mind’s eye.

-Padmaja Borwankar

Mr. Anand Vora

Q. Share a glimpse of your personal life.

Been a Mumbaikar since birth. Love Mumbai, have seen the city grow and expand over time. Enjoyed school, junior college and my first 10 years of work

in Andheri. “Chembur!”, I had heard it for first time with admission at VESIT; seemed an outlandish place of somewhere in Mumbai. Have two brothers, they chose career in Finance world. My wife is from Vadodara, she still despises Mumbai after living here for ~20 years. She too is Engg grad and now lecturer at Polytechnic teaching Digital and Microprocessor subjects. I take pride in she choosing to take up and complete Masters in Telecommunication Engg at age of 40. The love for Mumbai has passed on to my son who swears by the city and its vibrant life. He graduated this year in Electronics Engineering from DJ Sanghvi CoE. Plans to pursue his Masters from Georgia Tech, Atlanta. I am still passionate about tinkering with technology. Along with my son & his college friends, in my spare time we built a quadcopter drone completely ground-up. Its flight controller uses 2 levels of PID stabilizing loops, electronic speed controllers, gyroscope, temperature compensated pressure gauge for altitude lock. Will be adding autonomous flight, GPS and face recognition (AI/ML) features.

Q. Let’s talk about your professional life.

I began my career at ABB (Asea Brown Boveri), back in 1988, the placement was chiefly through newspaper advertisement (remember, the placement dept at VESIT was still new). I guess, I could impress them to get placed in their R&D Dept for Telemetry and SCADA systems. Later I switched to L&T Industrial Automation R&D team. Both ABB and L&T gave me an enormous opportunity to learn and I exactly did that. Microprocessors, embedded systems, RTOS and discrete electronics become my life, passion and got deft with them. Along with my L&T stint, I did my PGD at National Centre of Software Technology. “Telecom networks” appeal made me join Tech Mahindra. Been with TechM since last ~21 yrs. The focus on technology, albeit now in Software and domain continued. At TechM played several roles from developer, analyst, telecom domain consultant, led delivery programs for client in UK, Europe and USA, led technical presales and lead some new initiatives. Currently ‘am responsible for Delivery oversight for High Tech companies in USA west coast region.

Q. Today the world is advancing at a rapid pace. Can you throw some light upon activities that students can do from the beginning which will help them get an edge?

Indeed, the world is advancing at a rapid pace, however, one thing that is still and will always be relevant is passion, energy and inquisitiveness; one

should cultivate and imbibe them. Keep learning beyond your academic studies – be it in technology, management, learning social or entrepreneur skills, public speaking. All this will help students get well rounded, give exposure to a different narrative and widen their perspective. Student may find their true calling in life

Q. What do you think is the importance of extra-curricular activities in a student’s life and how to manage them?

Extra-curricular activities, hobbies play an important part of grooming during the student life and even later in life. It gives opportunities of experiencing wins, failures, experimenting and more importantly about team play. Hobbies, even if it is reading fiction novels, cultivates passion and commitment. Any kind of extra-curricular activity be it team play, role play or solo it gives an opportunity to be immersive in it. THAT is the key foundation as you grow. This besides making new friends, new learning and most importantly time management. As we grow into our professional life, they give you an avenue for stress busters, rediscover yourself and again make new friends, relationship and reignite or keep passion alive

Q. Failure since ages has been a reluctance causing factor in life. What do you recommend for dealing with failure?

Failure are heart breaking but not a scourge. It is ok to feel bad, depressed, sad at failures, however, don’t let that feel take control of your life. Learn to divert energies in another direction, distract yourself out of it. And most importantly do not indulge in self-pity, just accept the failure and move on. It is ok to keep low profile for some time, however, rejuvenate and recharge yourself. Every stage of life, every assignment, every work will have success and failure as part of it. The more you want something, larger is the taste success and the kick of a failure; but then those are the stakes and rules of the play. For me, falling back on my hobbies, friends and family and taking some time off has helped to unwind from failures. Watching the world around me continue to be buzz, lively and indifferent to my failure has help me feel humbled and shake it off. Retrospect, learn if you can from the failure, don’t pity on self and then shake up, dust yourself and step into the arena again. Sun always rises the next day!

Q. Can you tell us something about interpersonal skills that we should have outside academics?

At induction completion event at my first job, the ABB General Manager was checking with our batch about background of each one of us, our assigned department and learning during the 1st year. On my turn, I had said that I learned a lot of practical circuit designs, real programming which was very different from academic theory and that I am excited to be part of R&D will strive to become the best. His piece of advice is still etched in my mind – “even if you become the greatest designer, your ideas and designs will never take off if you are unable to deal with humans who you will have to be convinced, coerced, review, seek approvals, get funding before they accept your ideas. Therefore, besides technology focus on interpersonal skills too”.

At every phase of career and personal life; the ability to articulate, communicate, using interpersonal skills, networking, dealing with stakeholders (in personal life too) is paramount and ubiquitous in every that we do and aspire to do. Clarity of thought and ability to articulate the right way is extremely important. Especially at work, ability to “represent at team” is bedrock of becoming a “leader”. Therefore, sharpen this skill and if it doesn’t come naturally to you, take up self-development courses for it.

Q. Any message for the new generation at VESIT?

Graduating and stepping into world of career can feel like jumping in a running train. Most find academics and real work very different and it may make you feel that college hasn’t prepared you for it. You are going to start at the bottom, recognize this as a starting point. This isn’t your final job; you have got one foot on the ladder and now you get to climb it. In ~3 years, your experiences will weigh more than your academic grades. Therefore, always remember that the best careers are determined the ability to grapple with 4 key aspects: relationships, skills, commitment and dealing with chaos & bureaucracy. Learn to navigate all of these.

Another aspect that is especially very true for your generation... just because your formal education might have ended doesn’t mean you should stop learning. If you don’t keep old skills sharp and continue learning new ones your career will become obsolete very fast. First 4-6 years you should be voracious learners at work and then regularly keep re-skilling. This will become your bedrock for growth and keep you relevant.

If you want to be an Entrepreneur, this is probably best time as India is at cusp of start-up culture. Take risks now when stakes are lower. Lastly don’t limit your aspirations, strive for them.
